

# TCN Series of Electrical Counter Instruction Manual

## Features:

- ◎ High quality microprocessor for the main control
- ◎ High precise measuring and high anti-interference
- ◎ Power fail memory function
- ◎ 4 or 6 digit display for option
- ◎ With F, R, N, C output modes

## 1、 Ordering code

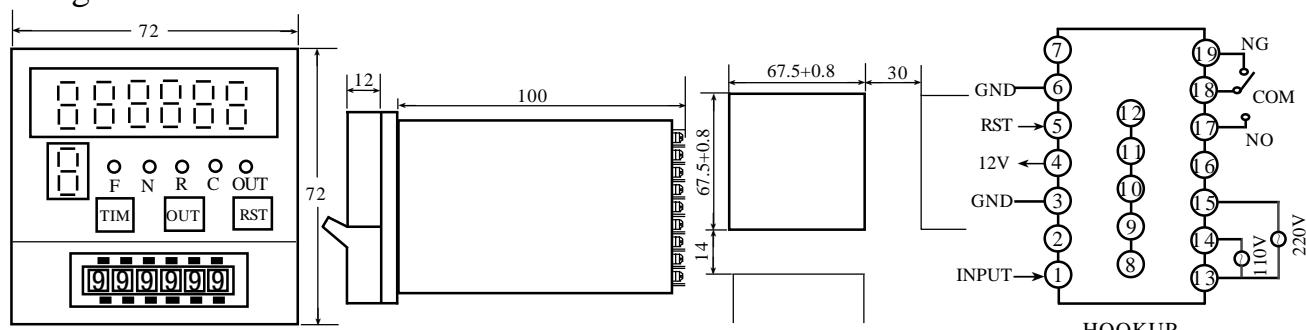

| MODEL    | SIZE    | LED DIGIT | STAGE | THRUMB |
|----------|---------|-----------|-------|--------|
| TCN-P41A | 72W*72H | 4         | 1     | A      |
| TCN-P61A | 72W*72H | 6         | 1     | A      |
| TCN-P41B | 72W*72H | 4         | 1     | B      |
| TCN-P61B | 72W*72H | 6         | 1     | B      |

## 2、 Parameters

|                               |   |
|-------------------------------|---|
| Power supply                  | AC220V/110V (24VDC is also available but should mention when order) |
| Consumption                   | <5W   |
| Delay time                    | 0-15S   |
| Auxiliary output power supply | DC12V ± 1V 50mA   |
| Insulation resistance         | ≥ 100M Ω  |
| Insulation strength           | 1.5KV/1M  |
| Anti-interference             | electrical source ± 2000V import ± 500V                             |
| Parameter reserve time        | 10 years  |
| Operating temperature         | 0~50°C 30~85%RH   |
| Input signals                 | Square wave, Sine wave and pulse                                    |
| Input impedance               | ≥ 10K Ω   |
| Max counting speed            | 1000cps   |
| Relay output capacity         | 250VAC/3A or 30VDC/5A   |

## 3、 Configuration and connection

## 4、 Use and Operation

- 4.1. The input wire should not be too long, better be shielded. Don use the instrument in the ambient humidity >90RH% or strong acid.
- 4.2. In case the vibration of input signal is too strong, please connect a capacity 10uF-33uF to filter.
- 4.3. Operating dielectric voltage in the oc casion between electronic circuit and metal of no charge, the counter fromthe circuit should break up or short-circuit. (the CMOS circuit will be damaged)
- 4.4. For BCD switch and other components normal life, please avoid instrument in areas surrounded by dust.

## 5、Operations

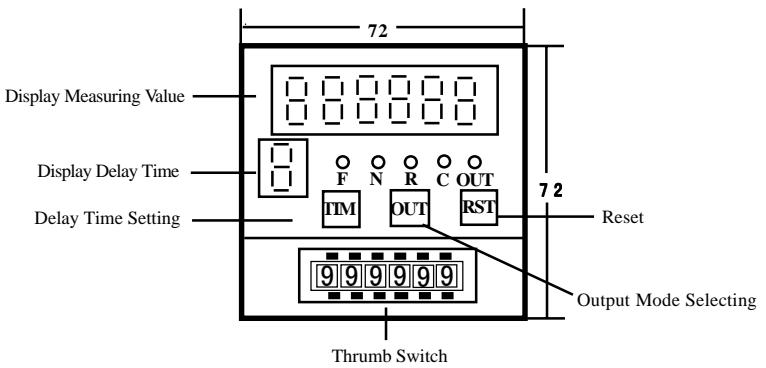

5.1、The windows and keys on the panel as the illustrate

Measuring Value, Delay Time Display, De-

lay Time Setting, BCD Switch, Output ModeSelecting, Reset .

5.2、TIM key is to modify the delay time. When the delaytime is 0-1, press TIM key, delay time willin crease 0.2second. When the delay time is >1, press TIM key,delay time will increase 1second till to 15 seconds.

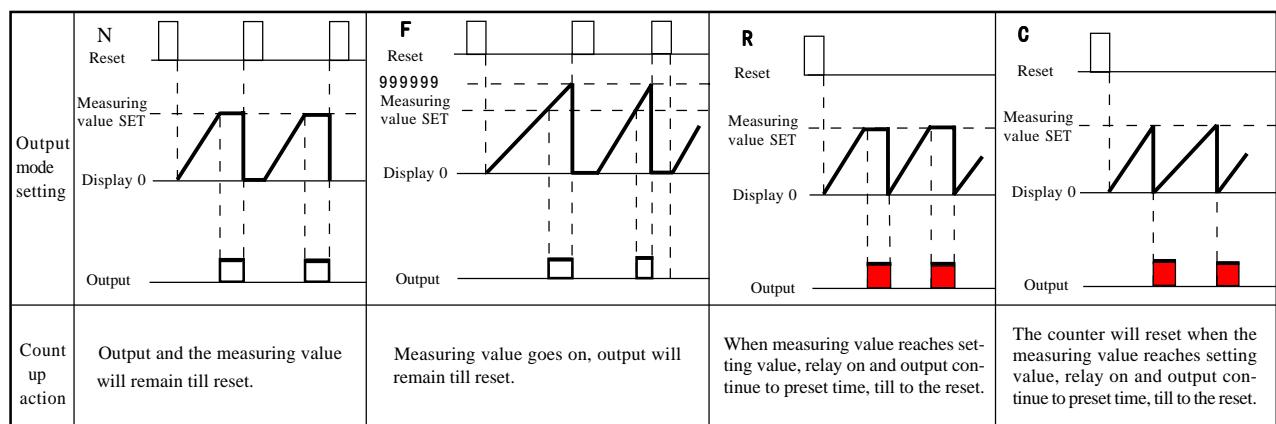

5.3、Press OUT key for 3 seconds, entering the output mode selecting estate. Press OUT key to select F, N, R,C and then the relative lamp of F, N, R, C will be on.

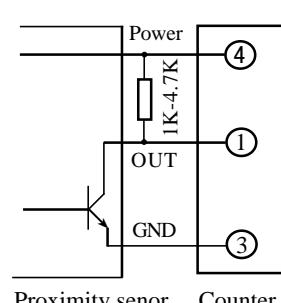

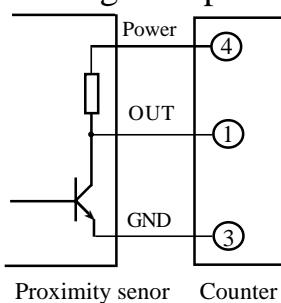

| F, M mode no delay time setting |                       |                       |                       |
|---------------------------------|-----------------------|-----------------------|-----------------------|
| Delay time displaying           | Actual delay time (S) | Delay time displaying | Actual delay time (S) |
| 0                               | 0;0.2or0.4            | 8                     | 8                     |
| 1                               | 1                     | 9                     | 9                     |
| 2                               | 2                     | A                     | 10                    |
| 3                               | 3                     | B                     | 11                    |
| 4                               | 4                     | C                     | 12                    |
| 5                               | 5                     | D                     | 13                    |
| 6                               | 6                     | E                     | 14                    |
| 7                               | 7                     | blank screen          | 15                    |

## 6、Illustrate of output mode of the counter

There are 4 types of output modes for option.

## 7、Connecting with proximity sensors
