五、注意 CAUTIONS

- (1) 若输入信号伴随高频干扰，应在线里用高频过滤器。

If the input signal mixes with the high-frequency interference, a high-frequency filter should be used in the wire.

- (2) 当电压与电流表共用一个电源极易造成数字表损坏，各表头应隔离供电。

They are easy to be damaged when the Voltmeter and Ammeter share power supply, so the power supply for the two should be isolated.

- (3) 存放温度：-10°C ~ +70°C，长期保存应避免直射光线。每三个月通电一次，通电时间不少于4小时。

Storage temperature: -10°C ~ +70°C, avoid light point-blank when long-time storage, please connect it to the power once every three months and power-on time shouldn't be less than 4 hours each time.

- (4) 本仪表校准时间间隔为一年。 The time calibration for this meter should be once a year.
